Naval Facilities Engineering Command
P.O. Box 727
San Bruno, California 94066-0720

ATTENTION: Ms. Bella G. Dizon, Code 1813BD

SUBJECT: Air Quality Solid Waste Assessment Test at Naval Air Station,

Alameda; BCDC Inquiry File No.CC.MC.7305.1

Dear Ms. Dizon:

Thank you for the opportunity to comment on the air quality solid waste assessment test report dated January 1991, and received in our office on January 31, 1991. Staff comments are based upon the McAteer-Petris Act and the San Francisco Bay Plan, California's approved coastal management program for San Francisco Bay.

Under the McAteer-Petris Act, the Commission has bay jurisdiction up to the line of highest tidal action and shoreline band jurisdiction in the area 100 feet inland from the line of highest tidal action. A federal agency must submit a consistency determination for activity within the Commission's jurisdiction and for activity that will directly affect the coastal zone. It appears that all or part of your project site is within the Commission's jurisdiction. However, no consistency determination will be required given that the testing and monitoring involve a small amount of soil removal which will likely have a de minimis effect on the coastal zone. A consistency determination would be required if remedial work or more extensive monitoring and testing were proposed.

Please feel free to contact me if you have any questions regarding this $\mathsf{matter}_{\:\raisebox{1pt}{\text{\circle*{1.5}}}}$

Very truly yours,

Caitlen Smill
